

# INFOTIV TELEMATIC DATA LOGGER

The Infotiv Telematic Data Logger performs all the expected task of a logger and much more! Keep track of product prototypes in real time with 4G connection.

## MAIN FEATURES:

- Program triggers to automatically set a notification in the logger when your expected error occurs. Notification can be pushed immediately to an interested party via their phone.
- See current configuration of hardware and software in tested device, allowing you to know even before you start your tests that the configuration is correct.
- For a specific SW configuration, the users can visualize how long time the configuration has been used, the number of users testing it and potential distance travelled for nonstationary objects.
- Keep track of the product status (Powermode, activated features, battery status etc.)
- Configure or read out logger data via a web frontend or phone app.
